

ABSTRACT

The invention may be broadly conceptualized as an approach in which a user profile (204) in the memory of a server (104) is remotely configured by use of a graphical interface on a web device (112) and the data contained in the data structure of user profile is sent to and intelligent appliance (116-122) to configure and update the recipe program data in the intelligent appliance (116-122).
